

## 1820. Maximum Number of Accepted Invitations Premium

Medium 🏷 Topics 🏢 Companies 💡 Hint

There are  $m$  boys and  $n$  girls in a class attending an upcoming party.

You are given an  $m \times n$  integer matrix `grid`, where `grid[i][j]` equals 0 or 1. If `grid[i][j] == 1`, then that means the  $i^{\text{th}}$  boy can invite the  $j^{\text{th}}$  girl to the party. A boy can invite at most **one girl**, and a girl can accept at most **one invitation** from a boy.

Return the **maximum** possible number of accepted invitations.

### Example 1:

```
Input: grid = [[1,1,1],
               [1,0,1],
               [0,0,1]]
```

Output: 3

**Explanation:** The invitations are sent as follows:

- The 1<sup>st</sup> boy invites the 2<sup>nd</sup> girl.
- The 2<sup>nd</sup> boy invites the 1<sup>st</sup> girl.
- The 3<sup>rd</sup> boy invites the 3<sup>rd</sup> girl.

### Example 2:

```
Input: grid = [[1,0,1,0],
               [1,0,0,0],
               [0,0,1,0],
               [1,1,1,0]]
```

Output: 3

**Explanation:** The invitations are sent as follows:

- The 1<sup>st</sup> boy invites the 3<sup>rd</sup> girl.
- The 2<sup>nd</sup> boy invites the 1<sup>st</sup> girl.
- The 3<sup>rd</sup> boy invites no one.
- The 4<sup>th</sup> boy invites the 2<sup>nd</sup> girl.
